FACT FLUENCY

EXPLORE THE 3s TIMES TABLE

LESSON 8

TODAY'S OBJECTIVE

Today we will explore the distributive property as a strategy to solve the 3s times table.

TAKE OUT YOUR **MATH JOURNALS**

WATCH ME FIRST

Today we'll use the 2s facts and 1s facts to solve the 3s facts.

I want to find the product of 3×3 .
I'll start by creating a model.

 WATCH ME FIRST

Here is 2×3 or
2 groups of 3

2×3

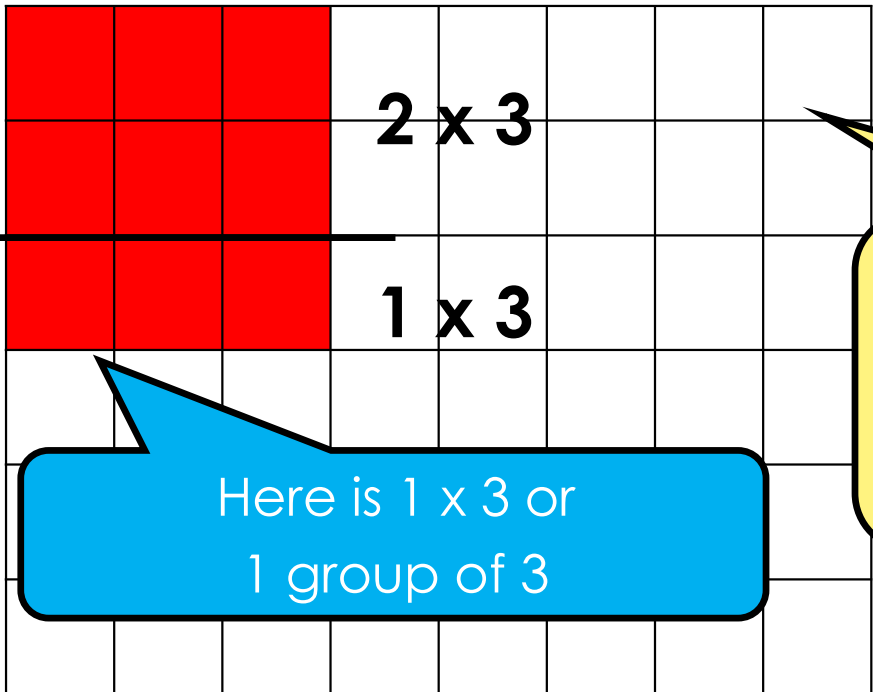

My model represents 3×3 . Inside 3×3 I see
2 groups of 3. 2×3 is a 2s fact.
I'll draw a line to separate the 2s fact.
This is called **decomposing**.

 **Decomposing is the act of breaking a quantity into parts.**

 WATCH ME FIRST

I also see one group of 3 inside the model.

Here is 1×3 or
1 group of 3

I decomposed
 3×3 and found two
multiplication facts inside.
 2×3 and 1×3

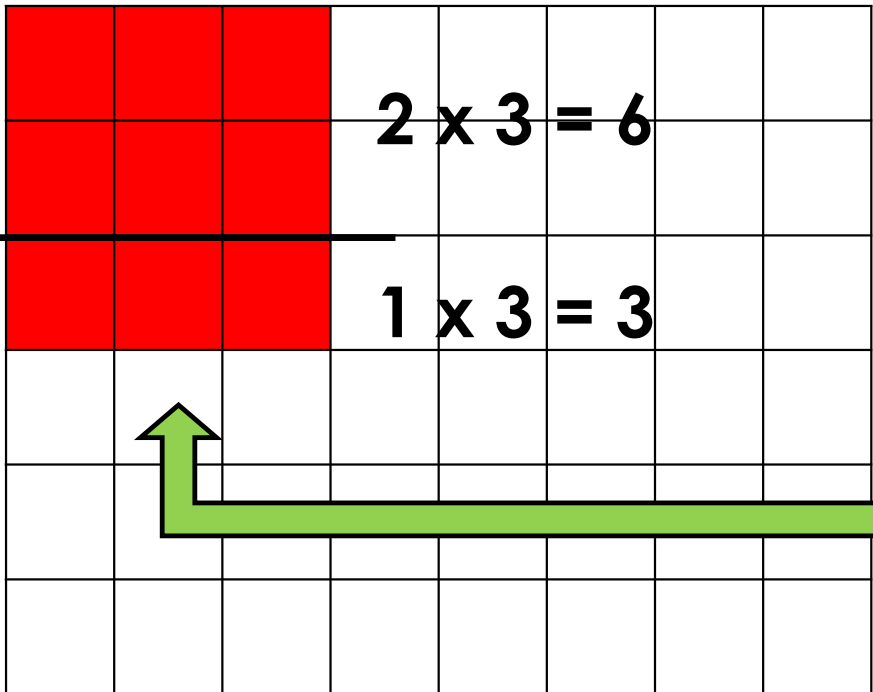

Next, I'll add both products to solve.

6	$2 \times 3 = 6$
3	$1 \times 3 = 3$

$6 + 3 = 9$
The total is 9.
So... $3 \times 3 = 9$

Hmmm. This looks familiar.
Besides being a 3s fact,
what other type of fact is this?

$3 \times 3 = 9$ is a square fact! How do I know?

Square facts have the same factors, AND they create squares when represented by a model!

LET'S WORK TOGETHER

Let's Review!

We can solve the 3s fact by using the related 2s fact and 1s fact:

- 1st – Decompose the 3s fact into the related 2s fact and 1s fact.
- 2nd – Find the product of both facts.
- 3rd – Solve the 3s fact by adding both products.

EXAMPLE: Find the product of 3×3 .

STEP 1

$$3 \times 3 = ?$$

$$2 \times 3$$

$$1 \times 3$$

STEP 2

$$3 \times 3 = \underbrace{(2 \times 3)}_6 + \underbrace{(1 \times 3)}_3$$

STEP 3

$$3 \times 3 = \underbrace{(2 \times 3)}_6 + \underbrace{(1 \times 3)}_3$$

6 + 3

3 x 3 = 9

Did you know that when we decompose a multiplication fact into 2 separate facts and combine the products, we are using the **distributive property**?

Vocabulary Highlight

The **distributive property** states, multiplying a sum by a given number is the same as multiplying each addend by the number and then adding the products.

EXAMPLE: SOLVE 3×5

$$3 \times 5 = (2 \times 5) + (1 \times 5)$$

$$3 \times 5 = 15$$

It's important to remember that **we can use different strategies to solve problems.**

 **Problem #1**
LET'S WORK TOGETHER

Based on previous lessons, what other strategy can we use to find the product of **3 x 4**? Explain your answer.

We could also use the related 2s fact and then double the product. This is the strategy we learned to find the 4s fact.

STEP 1	STEP 2	STEP 3
3 x <u>2</u> is related to 3 x <u>4</u> $3 \times 2 = 6$	Double 6. $6 + 6 = 12$	$3 \times 4 = 12$

3s Facts	
x1	
x2	
x3	$3 \times 3 = 9$
x4	$3 \times 4 = 12$
x5

Let's think of other strategies we learned in previous lessons, to solve 3×1 and 3×2 .

 **Problem #1**
LET'S WORK TOGETHER

Based on previous lessons, what strategy can we use to find the product of **3 x 1**? Explain.

We can use the **identity property** of multiplication to solve. Any number multiplied by 1 equals that number. So... $3 \times 1 = 3$ and $1 \times 3 = 3$.

	3s Facts
x1	3 x 1 = 3
x2	
x3	3 x 3 = 9
x4	3 x 4 = 12
x5	
x6	
x7	
x8	
x9	
x10	
x11	
x12	

 **Problem #1**
LET'S WORK TOGETHER

Based on previous lessons, what strategy can we use to find the product of **3 x 2**? Explain.

We can use the doubling strategy we learned to find the 2s fact.

$3 + 3 = \underline{6}$ then, $3 \times 2 = \underline{6}$ and, $2 \times 3 = \underline{6}$

We can also skip count by 2s.

	3s Facts
x1	$3 \times 1 = 3$
x2	$3 \times 2 = 6$
x3	$3 \times 3 = 9$
x4	$3 \times 4 = 12$
