

Draw a model and solve. Fill in the blanks.

1) $2 \times 3 = \underline{\hspace{2cm}}$

2) $3 \times 2 = \underline{\hspace{2cm}}$

3) $5 \times 4 = \underline{\hspace{2cm}}$

4) $4 \times 5 = \underline{\hspace{2cm}}$

5) If 4×8 equals 32 then what is the product of 8×4 ?

6) Find the missing factors.

If $3 \times 6 = 18$, then $\underline{\hspace{1cm}} \times \underline{\hspace{1cm}} = 18$

If $9 \times 5 = 45$, then $\underline{\hspace{1cm}} \times \underline{\hspace{1cm}} = 45$
