# Generating Equivalent Fractions
With models

Name:

Think about how many pieces each part in the models below should be cut into. Then draw horizontal lines on the model to help you find an equivalent fraction.

1 $\frac{1}{2} = \frac{}{12}$
Example

2 $\frac{1}{3} = \frac{}{12}$

3 $\frac{1}{4} = \frac{}{12}$

**4** $\frac{5}{8} = \frac{}{16}$

5 $\frac{1}{8} = \frac{}{16}$

6 $\frac{1}{4} = \frac{}{16}$

7 $\frac{3}{6} = \frac{}{12}$

8 $\frac{4}{5} = \frac{}{15}$

9 $\frac{4}{7} = \frac{}{21}$

10 $\frac{5}{6} = \frac{}{24}$

11 $\frac{2}{3} = \frac{}{18}$

12 $\frac{8}{10} = \frac{}{20}$
