Names Based on <b>Largest Angle</b>			

**Triangles** can also be named by \_\_\_\_\_

You can also think of these terms as **adjectives** to describe acute, right and obtuse triangles.

Names Based on <b>Equal Sides</b>			

I know what you're thinking.....what about triangles that have sides that are all different lengths? Those are called scalene triangles. You don't have to know that for 4<sup>th</sup> grade geometry, but now you are a jump ahead for more advanced geometry. 😊
