

# ELEMENTS, COMPOUNDS & MIXTURES

## INSTRUCTIONS

Review the following diagrams below carefully. You will be classifying each of the pictures below by placing the correct labels in the blanks below:

- |                        |                         |                                    |
|------------------------|-------------------------|------------------------------------|
| 1) Element             | 4) Mixture of Compounds | 5) A mix of Elements and Compounds |
| 2) Compound            |                         |                                    |
| 3) Mixture of Elements |                         |                                    |

Each circle represents an atom and each different colour represents a different kind of atom. If two atoms are touching, they are bonded together.
